Comments: ATom-3 Science Flight RF10 GVAC-LPLA. This flight was shortened distance-wise in the morning due to weather on the route. This flight included 5 vertical profile maneuvers (VPM) as re-planned. Due to extra fuel available since the flight distance was reduced, two eddy flux maneuvers and an MMS maneuver at 29kft were added. The 2nd eddy flux maneuver was a 4 leg wall at 500', 1000', just below the cloud deck at ~1300', and just above the cloud deck at ~2400'. The science instruments did very well and it was a very successful science flight. The aircraft arrived at Lajes in good shape although HF#2 was still inoperative and plans to troubleshoot at Lajes.
